

Inotherm

Inotherm aluminium doors are the crème de la crème of entrances and one of the most sought-after range of doors in Europe.

EXCLUSIV Aluminium Entrance Doors

1 Above-standard profile thicknesses

Due to their above-standard thickness, all entrance doors provide you with outstanding thermal insulation and high energy savings.

2 Anti-bending expansion layer

For better statics, an expansion layer is added to all entrance doors, which prevents the bending or deformation of the entrance door and maintains the stability of the door even with large temperature swings.

3 Additional seals

Our doors are sealed with three round liquid seals with vulcanised corner joints for better thermal insulation.

4 Thermal bridge interruption

A special heat barrier in the gap between the panel and the frame prevents heat from escaping and reduces your heating costs.

5 Aluminium threshold

A robust aluminium threshold with a thermal break reduces the energy flow in the lower part of the door and allows for the invisible mounting of the door frame.

Triple Glazing

All entrance doors feature glazing with three 6mm thick glass panes, which additionally insulate and enhance the safety of your home.
